1. EEPROM (eFuse) Contents

The RTL8723BU is embedded an internal non-volatile memory called eFuse. The eFuse emulates the structure of a usual EEPROM such as 93C46. We will describe the content and its addressing of the eFuse as we did in 93C46 and will mix the terms of EEPROM and eFuse in the following text,. After the initial power on or auto-load command to the eFuse, the RTL8723BU performs a series of EEPROM read operations from the EEPROM addresses 00h to 7Fh. The definition of each EEPROM byte is shown as the below.

Note: It is suggested to obtain Realtek approval before any change on the default settings of the EEPROM.
